

Using the AnyConnect app on your iPad or iPhone

Configure

Follow the steps below to install and configure Cisco AnyConnect Client for your iPhone or iPad.

1. Install Cisco AnyConnect Client from the iTunes App Store.
2. Once installed, select the **AnyConnect** icon.
3. Enable this software by clicking OK
4. Select **Add VPN Connection**.
5. Enter a Description (e.g., Yale_VPN) and the Server Address: **access.yale.edu**. Also set certificate to Automatic.
6. Click **Save**.

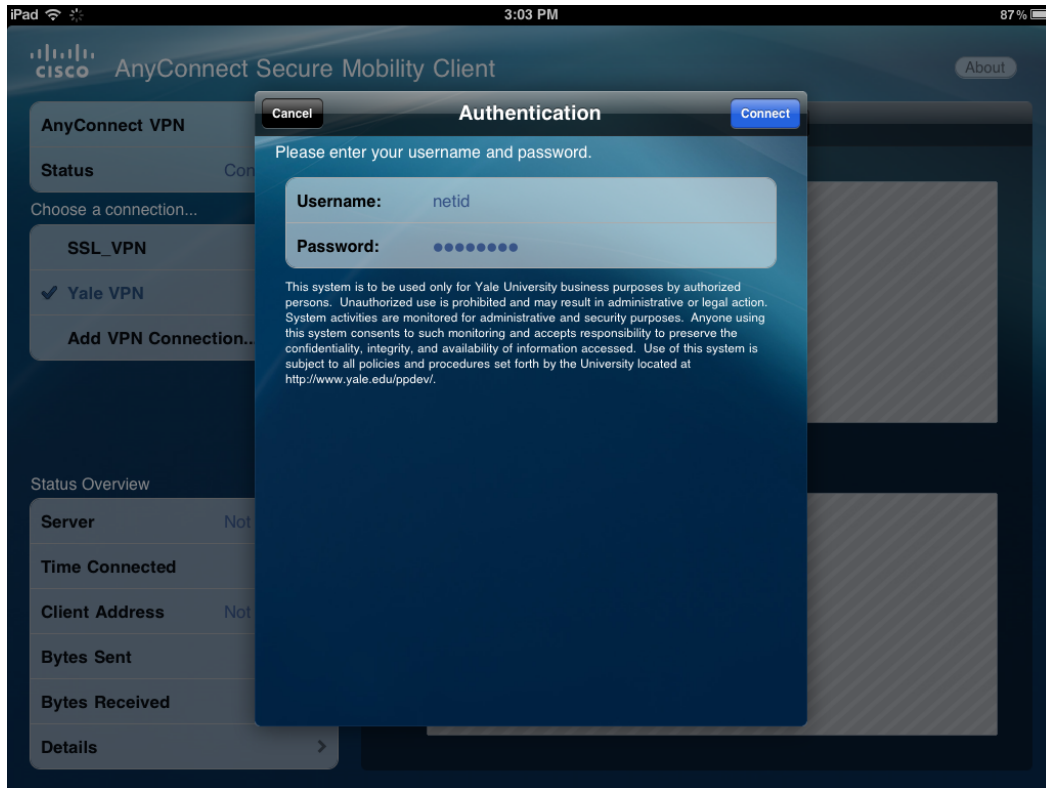

The Cisco AnyConnect Client is now configured on your device. **The first time you connect the AnyConnect App will automatically configure an additional SSL_VPN connection**, either connection can be used.

Connect

Follow the steps below to connect to Cisco AnyConnect Client from your iPhone or iPad.

1. Select the **AnyConnect** icon to open it.
2. Select the VPN connection you added.
3. Turn AnyConnect VPN **ON**.
4. When prompted, enter netid and password and click **Connect**.

You are now connected to VPN.

Disconnect

To disconnect from VPN, select **OFF** from AnyConnect VPN.
